THE ROADMAP

Bumpy has plans.

There is already a working news site and an AI toad answering questions. Now we want to give people more reasons to spend time here.

“I had intended to be ornamental. Events have overtaken me.”

The following pages show what is live, what we want to build next and what still needs investigation. There are no fixed launch dates for the proposed features.

Read the technical companion at theroyalpond.fun/roadmap.html

LIVE / STILL IMPROVING

Meet the AI Bumpy.

On Telegram and the website

Ask him about crypto, a Pond story or market data. He is live in both places, and we are continuing to improve how he listens, explains things and joins a conversation.

The news and the community

Sourced stories, commentary, archives, RSS and share cards. Royal Receipts already tracks promises with checked dates. Telegram has community tools and stickers.

Announcements find their way to Telegram

The X-to-Telegram relay is working. Five daily stories and spaced X posts are configured; the first full unattended publishing cycle still needs checking.

What comes next for him

Better follow-ups, fewer repeated jokes and clearer answers when data is missing. The aim is a useful host who knows when to stop talking.

NEXT / PRODUCT AND COMMUNITY

More to do in the Pond.

Make something worth sharing

A Meme Foundry for captions and reaction cards, plus a moderated place to submit original memes, useful explanations and sourced news tips.

Help shape what gets built

Try advisory votes on the next tool or creative theme. Recognise useful contributions with badges and credit, rather than rewarding message counts.

Make the news easier to use

Improve story explainers and saved reading. Explore opt-in digests and safe ways to ask Bumpy about a link or pasted article.

Everyone can take part

The news and ordinary community conversation will stay open to non-holders. We want people who enjoy the stories and jokes, as well as the token.

LIVE RECEIPTS / GAMES TO EXPLORE

A memory. And a little mischief.

Royal Receipts is already live

Our watchlist keeps sourced promises in view, with checked dates and labels such as Watching. That means we are following the claim, not declaring a project guilty.

Give the promises a history

Build clearer timelines of what was said, what shipped and what changed. Invite evidence and corrections, credit delivery, and apply the same scrutiny to our own roadmap.

A small game worth coming back for

Try free Bumpy mini-games, headline quizzes and community score challenges. Start with fun, badges and leaderboards; no wallet needed.

Token connections, further out

Explore optional cosmetics, membership perks or funded reward events if the games catch on. Budget, fair-play checks and review come first. No wagering or promised earnings.

EXPLORING / TOKEN UTILITY

A few useful jobs for the token.

Optional membership

Investigate extra Ask Bumpy allowance, early tool access and personal dashboards. Wallet ownership could be checked without depositing tokens.

Tip a creator directly

An opt-in tip button could send tokens from your wallet to a creator’s. You check and sign the transfer. Bumpy never holds your balance.

Pay for accepted contributions

Trial a small, funded bounty programme for defined work. Later, consider token payments for useful creative services. Rewards need a budget before they need a launch post.

These are proposed features

Most can be built around the current token. Funding, wallet safety and the rules on token-linked benefits need checking before a public trial.

EXPLORING / THE ROYAL RESERVE

Could staking work here?

We think it is worth investigating.

A small pool could share a fixed reward budget among participants over a stated period. It would use a separate contract and clear withdrawal rules.

The funding comes first

Rewards would need to be funded from disclosed reserves or fees already received. This is not blockchain-validator staking, and future trading fees cannot be assumed.

Then the contract and withdrawal tests

Independent security review, legal assessment and a funded pilot would come before deposits. If that is too expensive or complicated, non-custodial membership can come first.

A lock is not a price guarantee

No fixed APR, income or price floor is promised. Pons buyback-and-vest is a separate mechanism; it does not pay community staking rewards.

LONGER TERM / IF THE PROJECT GROWS

Room for a much bigger Pond.

Take Bumpy further

Explore multilingual briefings, audio, a mobile-friendly app experience and Bumpy tools for other communities. Merchandise and collaborations may follow if people want them.

Work towards wider discoverability

Keep token information accurate and explore suitable data listings. Exchange applications are a longer-term possibility, subject to demand, liquidity, security and the exchange’s own decision.

Keep people informed as we build

Publish releases and changes to the plan. Explain reward budgets and contract dependencies. The owner can claim creator fees, but future fee-sweep independence still needs clarification.

No exchange listing or partnership is secured by this roadmap. Proposed features depend on funding and review. Reading the news does not require a wallet.
